

Working AI. Proven compliance.

Siraj puts AI to work inside the daily workflows of Saudi mid-market companies, and keeps them compliant with Aramco, NCA and PDPL requirements. In Arabic and English. From Khobar.

Who we are

Siraj at a glance

Siraj is a Khobar-based technology company founded in 2019. We began in cybersecurity compliance. In 2026 we added a second line: helping companies put AI to work in their day-to-day operations. Both serve the same client, the Saudi mid-market company that has real workflows and real obligations, and no room for a full-time AI team or security department.

Siraj AI

AI consulting and build for mid-market companies. We turn repetitive, document-heavy work into working AI skills, deployed inside the tools your team already uses. Arabic and English. PDPL-compliant from the first day.

Siraj AI Audit and the One-Page AI Game Plan

First Build

Siraj Skills Library and Siraj Skill Packs

Fractional AI Officer

Siraj AI Foundations workshop

Siraj Cyber

Cybersecurity compliance implementation. We implement the controls, prepare the evidence, and work with the auditor until your certificate is issued. Then we do it again at every renewal.

Aramco Cybersecurity Compliance Certificate (CCC)

NCA Essential Cybersecurity Controls (ECC)

ISO 27001

Security awareness programmes

IT maintenance & cloud administration

2019

Founded in Al Khobar, Eastern Province

300+

Aramco compliance certificates secured for clients

7

Years serving Saudi companies in Arabic and English

2

Service lines, one local team

Seven years of implementing security controls on client infrastructure is why data protection is designed into every Siraj AI build, not retrofitted. Our principle has not changed since 2019: people before technology.

The problem Siraj AI fixes

Your team already pays for AI. It is doing almost none of the work.

Most Saudi companies use ChatGPT as an expensive search box: quick questions, small tasks, nothing that moves the business. We call it random acts of AI. No strategy, no reusable assets, no measurement, and nervousness about where company data ends up.

Your business in twelve months

Workflow	Today	With Siraj
Proposals and quotations	Written by hand each time. Quality depends on who is free.	Generated from your past winning documents. A person reviews, then sends.
Customer replies	Each one typed. Tone varies. Arabic replies wait for the right person.	Drafted in Arabic in your brand tone. Edge cases flagged to a human.
Monthly reports	Days of copy and paste from the ERP into Word.	Produced from your numbers, in Arabic and English, in minutes.
Invoices and contracts	Keyed in manually. Errors found late.	Data extracted and routed to the right system. PDPL-safe.
Tenders	Every response starts from a blank page. Deadlines missed.	Drafted from your past responses, in the required format, ready for review.
AI itself	Individual trial accounts. Nobody knows what data goes where.	One owner, one policy, measured results, a library you keep.

The fix is not a bigger chatbot. It is a small number of specific workflows, each turned into a working skill your team uses every day, measured in hours returned.

How Siraj AI works

Four steps. Each one optional until it proves itself.

Every client follows the same path. Each step is a complete product and the bridge to the next. You decide after each one.

1 2 3 4

Siraj AI Audit

Two weeks

Interviews, workflow mapping, data and PDPL readiness check. Every opportunity scored by return, risk and compliance exposure.

You get the One-Page AI Game Plan, in Arabic and English.

First Build

Weeks, not months

The top one to three workflows turned into working AI skills, deployed inside your CRM, ERP, email or WhatsApp. Arabic-tuned, human-reviewed, measured.

You get a measurable result and your first case study.

Siraj Skills Library

Monthly

A growing, maintained library of your custom skills. Consistent, on-brand, compliant output every time. Portable across the major AI platforms.

You get a reusable asset the company owns.

Fractional AI Officer

Monthly

Executive-level ownership of your AI roadmap: strategy time, vendor guardrails, PDPL governance, quarterly Game Plan review, team training.

You get AI leadership without the executive salary.

No-risk entry

If you proceed from the Audit to a First Build, the audit fee is credited in full. You risk two weeks. You keep the Game Plan either way.

Siraj AI Foundations

A half-day workshop that gets your whole team literate and bought in. Runs alongside any step. Adoption rises, and so does the return on everything above.

Steps 3 and 4 are usually sold together as one monthly retainer.

What Siraj AI builds

A skill is a packaged, reusable AI capability.

Your team invokes it inside the AI platform you already pay for. The same job, done the same way, every time. Skills follow an open standard that works across more than 30 tools, so you are not locked in.

Instructions	Logic	Data	Output format
How the job is done, in your company's words and rules.	The steps, checks and escalations that make the output reliable.	Your past documents and sources, handled PDPL-safe.	Your template, your tone, Arabic and English.

Skills we build often

Bilingual proposal generator

Trained on your past winning proposals and quotations.

Management-report writer

Turns raw numbers into a structured Arabic and English summary.

Tender-response assistant

Aligned to Saudi government procurement formats.

Arabic customer-reply drafter

Keeps your brand tone. Escalates edge cases to a person.

Invoice and contract processor

Extracts and routes data from documents. PDPL-safe.

Your workflow here

If it is repetitive and document-heavy, it is a candidate. The Audit finds it.

Siraj Skill Packs

Five to eight proven skills for one sector, ready to deploy and localised to your company. Accounting firms, clinics, law offices, retail, logistics and contracting.

Every build includes

Arabic tuning, MSA and dialect. PDPL-safe data handling, designed in at discovery. A human-review step before anything leaves the company. Staff handover, so the team runs it without us.

Why Siraj

What global firms and local dev shops cannot easily match.

Arabic-native quality

MSA and dialect output good enough to send to a customer. Global tools degrade badly here. We benchmark Arabic accuracy on every build.

PDPL designed in, not retrofitted

Data residency and compliance architecture from the first day of discovery, by a team that has implemented security controls for seven years.

Working software, fast

A first measurable result in weeks. Never a 60-page strategy deck with nothing running.

Local, in-language delivery

In-person workshops, engagement terms a mid-market operations team can manage, and alignment with Vision 2030 and SDAIA direction.

How we compare

	Global AI firm	Local dev shop	Siraj
Arabic output	Degrades badly. Needs heavy post-editing.	Varies by developer.	Native. MSA and dialect, benchmarked.
Data protection	Retrofitted at the end.	Rarely addressed.	Designed in from discovery.
First working result	Months, after a strategy phase.	Only if you already know what to build.	Weeks, after a two-week audit.
Engagement size	Enterprise minimums and governance overhead.	Project by project. No ownership after delivery.	Sized for a mid-market team. Ongoing ownership on retainer.
Who you deal with	A remote team in another time zone.	Developers.	A local team that speaks your language and knows your sector.

A 140-person logistics company, twelve months in.

Hours lost every week to manual reports and bilingual customer replies. Three people on the monthly pack every Thursday. Here is how the path on page 4 plays out.

Illustrative example. Timings are typical. Outcomes are the targets we set, not a named client's figures.

What changed

- Monthly pack produced in an afternoon, in both languages
- Arabic customer replies drafted in minutes, approved by a person
- Delivery notes extracted and routed, not keyed in
- One AI policy, one owner, every account under it
- A skills library the company owns and keeps expanding

The audit is a small door into a long relationship. That is the design.

Siraj Cyber

We implement. You pass.

Siraj Cyber is not an audit firm. We implement the required controls on your infrastructure, prepare the compliance report and evidence pack, and work with the third-party auditor until your certificate is issued. Auditors know a Siraj evidence pack is complete. We do not cut corners.

1	2	3	4	5
Gap assessment	Implementation	Evidence and report	Auditor liaison	Certificate issued
Every control checked against the standard on your actual environment.	Controls implemented on your infrastructure. Policies written for your company.	The compliance report and evidence pack, in the format auditors expect.	We submit, answer every query, and close findings until none remain.	Renewal dates tracked. We start the next cycle before the reminder arrives.

What we cover

Aramco CCC

The Cybersecurity Compliance Certificate required of Saudi Aramco third parties, under SACS-210 (formerly SACS-002). New certification and two-yearly renewals. 300+ secured since 2019.

NCA ECC

The National Cybersecurity Authority's Essential Cybersecurity Controls for entities in scope. Gap assessment, implementation and evidence.

ISO 27001

An information security management system built for your size, and support through certification.

Security awareness

Managed phishing simulation and training programmes as a KnowBe4 partner. People remain the first control.

Clients

Trusted across Saudi Arabia and the Gulf.

Contractors, manufacturers, logistics operators, financial institutions and industrial joint ventures. Most certificate clients come back to us at renewal.

300+

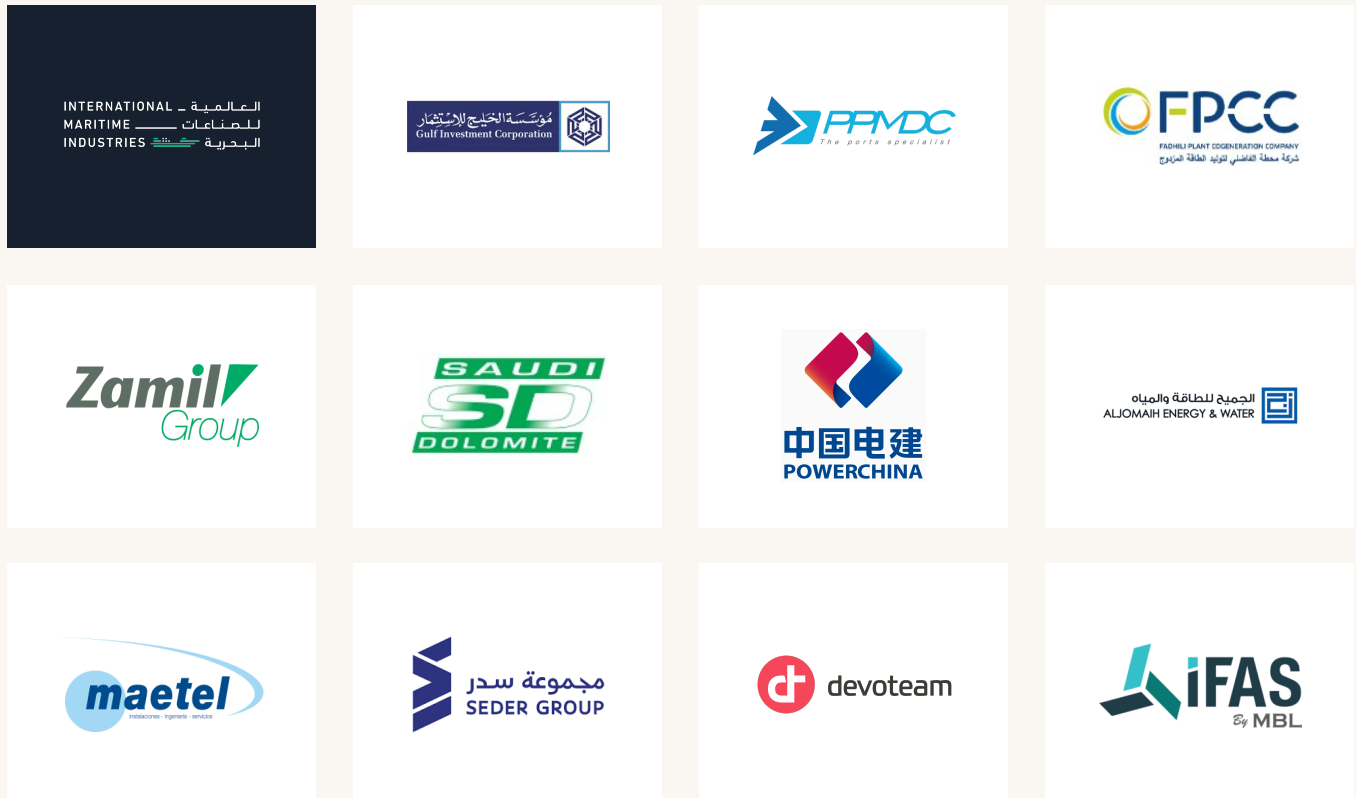

Aramco compliance certificates secured for clients

2019

Serving Saudi companies since. Most certificate clients renew with us

3

Standards covered end to end: Aramco CCC, NCA ECC, ISO 27001

Selected clients, 2019 to 2026. References available on request.

Next step

Start with the Siraj AI Audit.

Two weeks. We map your workflows, score every opportunity by return, risk and compliance exposure, and hand you the One-Page AI Game Plan. If you proceed to a build, the audit fee is credited in full. You risk two weeks. You gain a plan you own either way.

Need a certificate instead? Ask Siraj Cyber for a gap assessment against Aramco CCC, NCA ECC or ISO 27001. We will tell you how far you are from passing, and what it takes.

1	2	3
One call	One meeting	Two weeks later
Tell us what your team spends its week on. Thirty minutes, no slides.	We agree who we interview and which systems we look at.	You hold the Game Plan and decide whether to build.

Sound familiar? You are ready for the Audit.

- Your team uses ChatGPT, but mostly for trivia
- The same reports and proposals are written by hand every week
- You suspect AI could save real hours, but nobody owns it
- You worry which AI tool your company data ends up in
- Arabic AI output is not good enough to send to a customer
- Competitors talk about AI and you have no plan on paper
